Your all-in-one software for additive manufacturing. AM-Studio is the software that translates your product design innovatively and intelligently into practice. Perfectly matched to your manufacturing process, it guides both novices and experts in 3D printing step by step to the best result.

**With AM-Studio ...**

### ... you produce economically

**Optimized use of resources**
With **AM-Studio** you use material, energy and time particularly efficiently. As a result, you reduce the costs of each individual component production.

**High return on investment**
With comparably low investment costs, **AM-Studio** enables you to produce profitably faster.

**Reduced training effort**
Even as a newcomer, you will be working independently after only a short training period. A short intro-duction is sufficient for onboarding.

### ... your additive manufacturing becomes more sustainable

**Minimum material requirements**
Innovative calculations and optimized support structures reduce material requirements while maintaining stability.

**Up to 30 times faster**
The powerful **Titan.Core** performs calculations up to 30 times faster. This saves energy and reduces the load on your server.

**First-Time-Right**
Thanks to the prediction of distortion and residual stresses, you know the result before production and reduce misprints to a minimum.

### ... manufacture under your general conditions

**Plug-and-Print**
You don't need any special hardware. Simply set up software, select data from your already integrated 3D printer and start.

**Intuitively operable**
The easy-to-understand user interface guides beginners through the process steps without limiting professionals in their options.

**All-in-one**
**AM-Studio** eliminates the need for expensive add-ons. The complete solution includes everything you need for data preparation.
